After a custom baler complained to us about rocks and other objects continually bending his metal pickup bands. We developed the poly pickup bands. Our goal in developing these was to eliminate the problem of bending and wearing. These bands are made heavy and will withstand impacts without damage. If pickup teeth do rub against the bands, they will not wear through nearly as quickly as with steel bands. In addition, hay feeds through much more smoothly and easily. The ½ in. thick bands have a 1/4-in. support ring on the inside to strengthen and maintain shape. Longer bolts (included are required to attach the poly bands.

- Flexible
- Reduced Tooth Wear
- Less Noise
- Maintained color
